

SOFTWARE REQUIREMENTS SPECIFICATION (SRS)

STARTUPCONNECT

1. Introduction

STARTUPCONNECT is a web-based platform that connects startup founders with potential investors through an AI-assisted investment ecosystem. Founders can create startup profiles, upload business documents, receive AI-generated market analysis and investment readiness scores, while investors can discover promising startups, request access to detailed information, communicate securely, and schedule meetings for potential investments.

2. Objectives

- Connect founders with verified investors
- AI-based market analysis and investment readiness scoring
- Secure startup profile and document management
- Investor startup discovery with advanced filters
- Proposal management and tracking
- Secure private access request system
- Real-time chat and meeting scheduling
- Role-based authentication and authorization

3. Users

- Founder
- Investor
- Administrator

4. Functional Requirements

- User Registration/Login
- JWT Authentication and Role-Based Authorization
- Startup Profile Creation and Management
- Business Plan & Pitch Deck Upload
- AI Market Analysis
- AI Investment Readiness Score Generation
- Startup Search and Discovery

- Proposal Submission and Tracking
- Investor Private Access Request
- Founder Approval/Rejection of Requests
- Secure Chat & Messaging
- Meeting Scheduling
- Notifications and Alerts
- Dashboard with Analytics
- Investment Portfolio Management
- Admin User & Startup Verification

5. Non-Functional Requirements

Security using Spring Security and JWT, encrypted passwords, responsive UI, RESTful APIs, high availability, scalability, maintainability, audit logging, fast response time, and secure file storage.

6. Technology Stack

Frontend: React.js, HTML5, CSS3, JavaScript

Backend: Spring Boot (Maven)

Database: PostgreSQL

ORM: Spring Data JPA

Security: Spring Security + JWT Authentication

AI Module: Java (AI-based Investment Readiness Score), News API (Market & Industry News Integration)

IDE: IntelliJ IDEA, Visual Studio Code (VS Code)

Version Control: Git & GitHub

7. Database Tables

Users, Founders, Investors, Startup_Profile, Documents, AI_Analysis, Investment_Score, Proposals, Access_Requests, Meetings, Chat_Messages, Notifications, Investments, Admin

8. Future Enhancements

- AI-based investor-startup recommendation engine
- Blockchain-enabled smart investment contracts
- Video conferencing integration
- Mobile application (Android & iOS)
- Multi-language support
- AI chatbot for founders and investors
- Real-time market trend prediction
- Digital document verification
- Cloud deployment with microservices architecture
- Investment analytics and forecasting dashboard
